

# OBS Web Mixer - Accessing OBS WebSocket Connection Information

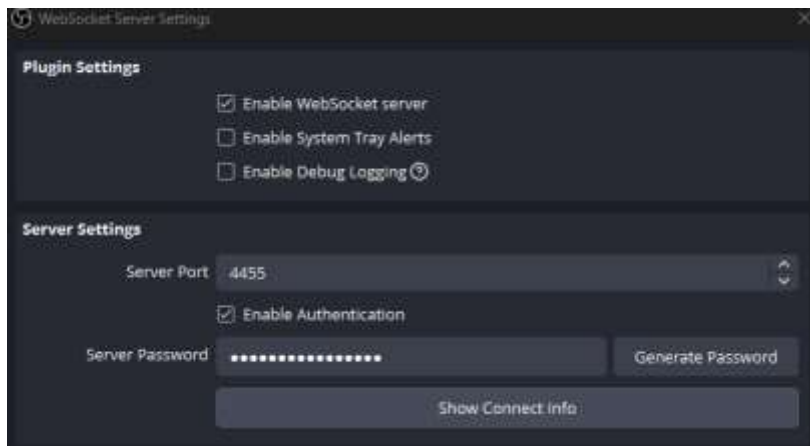

## Access WebSocket Server Settings

- Open OBS Studio and locate the toolbar at the top of the screen.
- From the toolbar, select **Tools**, then click on **WebSocket Server Settings** in the dropdown menu.

## Configure the WebSocket Server

- In the **WebSocket Server Settings** window, ensure the following:
  - **Enable WebSocket Server:** This box should be checked.
  - **Server Port:** If you are unfamiliar with server ports, leave this set to the default value (typically **4455**).
  - **Enable Authentication:** This option should be enabled. If no password is currently set, generate a new password.
- Once these settings are configured, click the **Show Connect Info** button.

## Retrieve Connection Information

- The **WebSocket Connect Info** screen will display the server's connection details, including the server IP address and port.
- Please note: The IP address provided here is an estimate based on your network configuration. If you encounter issues connecting using this IP, you may need to manually identify your IP address.

## Manually Find Your IP Address

- If the connection information from OBS does not work, follow the additional instructions provided online: [Finding Your IP](#)
